Datalysts Publisher: OAuth, upload interface and internal dashboard

Project 325844325284. Internal tool, no end users other than The Datalysts.

How uploads work:
1. A finished Short (MP4) and its caption are committed to the private repo dmganton/datalysts-media, with a queue file giving the publishing time.
2. A scheduled GitHub Actions job ('Publish reels') runs hourly. It refreshes the OAuth token (stored as an encrypted GitHub secret) and calls videos.insert to upload the Short to The Datalysts channel (@thedatalysts, UCnoYbJ3IZY51td_2oUQdXuA).
3. channels.list is used only to confirm the authorised channel. No other YouTube data is read or stored.
4. Results (video ID, time) are written to a log file in the same private repo.

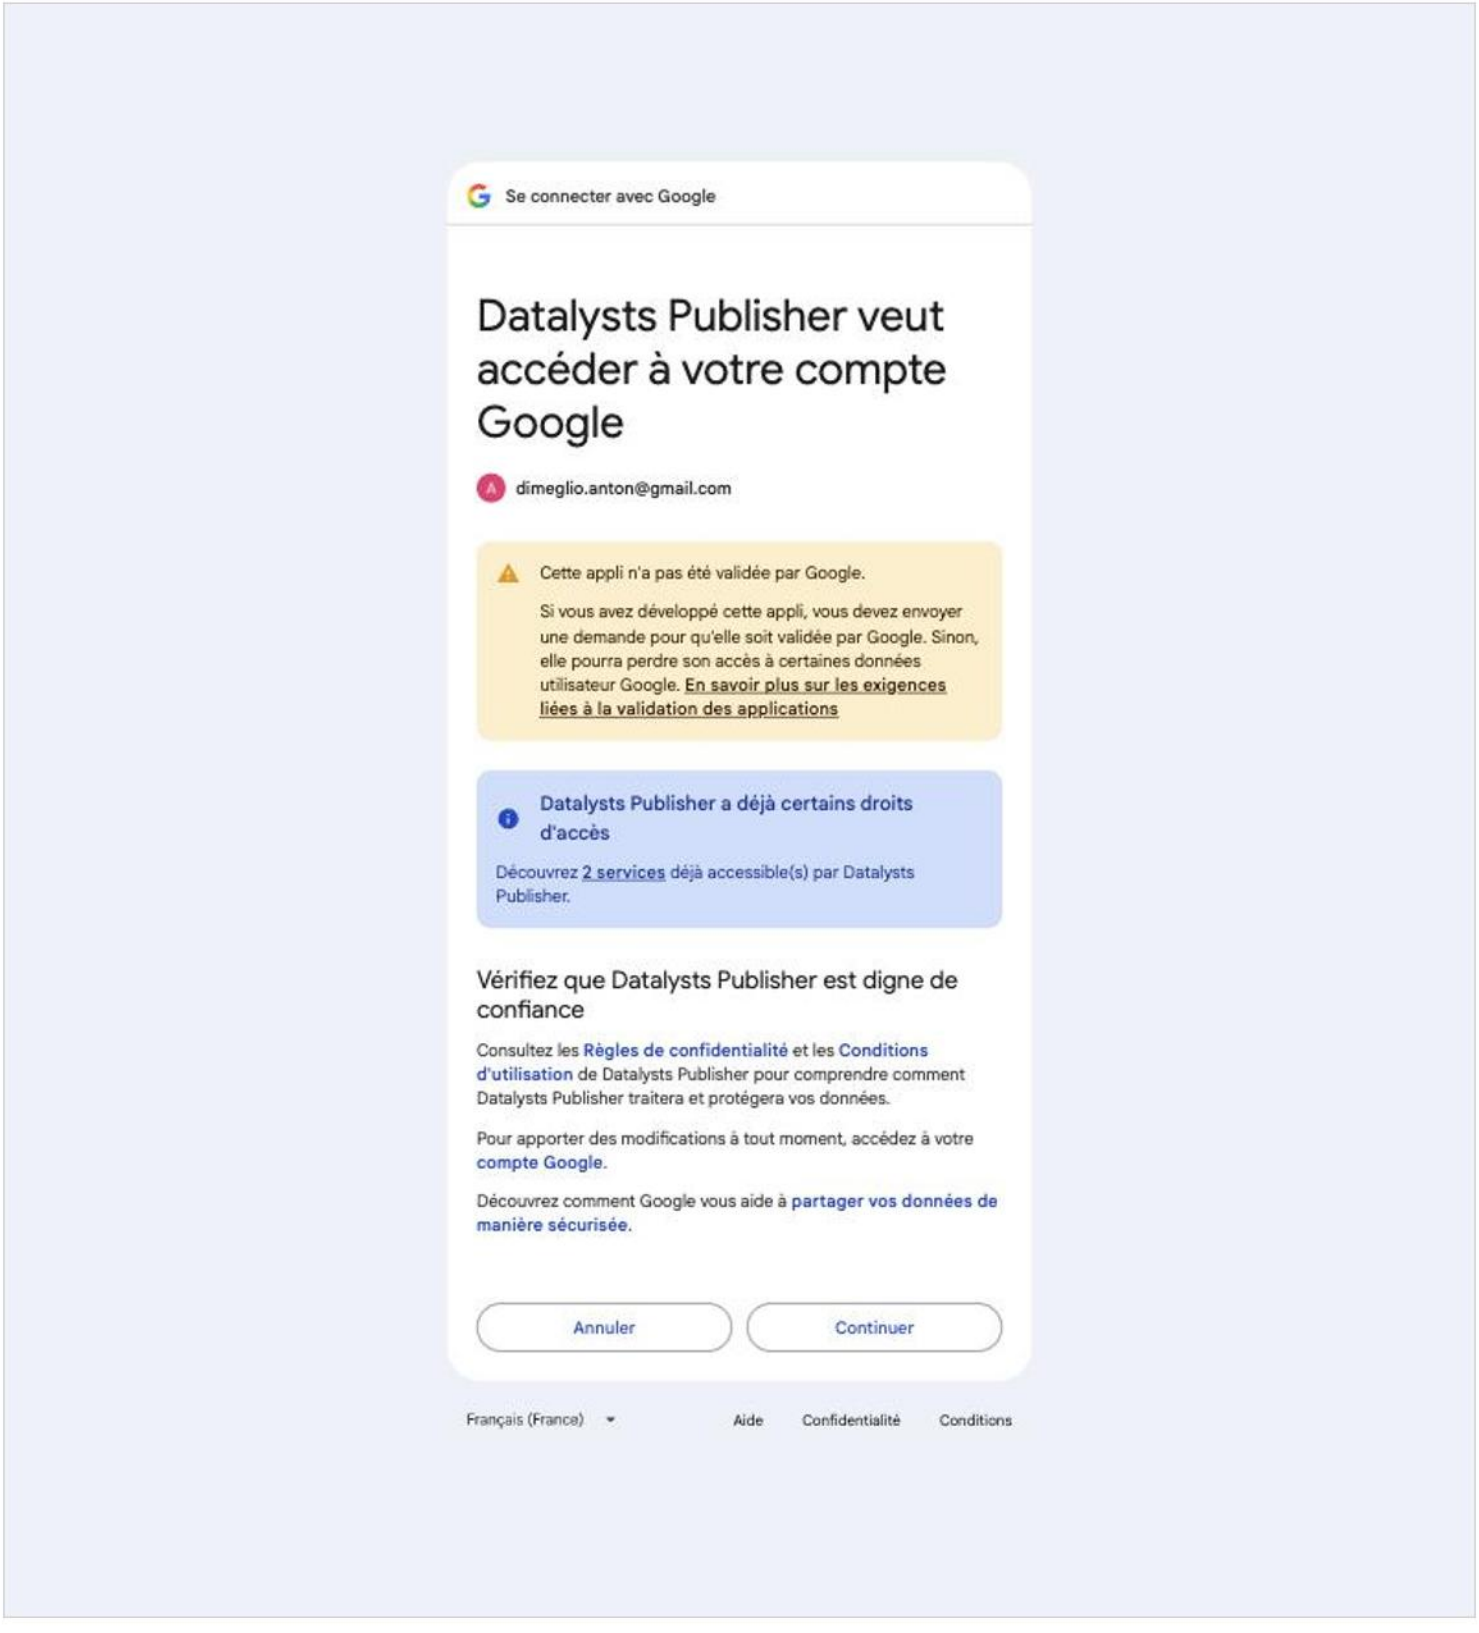

There is no web or mobile interface: the GitHub Actions page is the tool's dashboard.
Access can be revoked at any time from the Google Account connections page (page 4).

Pages: 2-4 OAuth flow (account selection, consent, revocation); 5-6 upload job and log.

a) OAuth flow 1/3: account selection for Datalysts Publisher

a) OAuth flow 2/3: consent screen (scopes: youtube.upload, youtube.readonly)

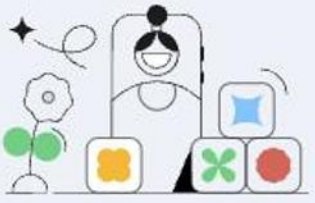

a) OAuth flow 3/3: revocation at myaccount.google.com/connections
